

Capsule Endoscopy – How to Prepare

Please read this information right away.

Your doctor has recommended that you have an exam called “capsule endoscopy.” Here is information about this exam that you need to know. It is important that you understand and follow your doctor’s instructions carefully.

Your appointment is scheduled for: Date _____ Time _____

At: HealthPartners Specialty Center
Digestive Care Center
435 Phalen Blvd.
St. Paul, MN 55130

After this exam, you will have another
appointment at the Digestive Care
Center on: Date _____ Time _____

If you cannot keep your appointment, please call The Digestive Care Center at 651-254-8600 at least 24 hours in advance.

What is capsule endoscopy?

- Capsule endoscopy is an exam of the lining of the middle part of your digestive tract. This includes the three parts of the small intestine. You will swallow a pill-sized video capsule. It will take pictures of your intestine as it travels through it. These pictures will be sent to a data recorder you wear on a waist belt.
- This exam helps your doctor determine the cause for symptoms you are having. These may include abdominal pain, diarrhea, bleeding or anemia.
- When you arrive at the Digestive Care Center for your exam, a nurse will place a belt that holds a data recorder and battery pack around your waist. Tape patches with sensing electrodes will be placed on your chest and abdomen. After you swallow the capsule, you may return to your daily activities with little restriction.

Continued

- You will return to the Digestive Care Center eight hours later to have the electrodes and belt removed. The capsule will pass in your stool within a few days. You may flush it down the toilet.
- A gastroenterologist (doctor who specializes in the digestive system) will study the video and prepare a report for your primary doctor.
- There is a risk of capsule retention and obstruction (blockage) during the exam. This may require surgical removal of the capsule.
- Please tell our medical staff if you have a defibrillator or pacemaker.

How do I prepare for my capsule endoscopy?

One week before the exam:

- Stop taking iron tablets.

The day before the exam:

- Take only a clear liquid diet. Clear liquids are anything you can see through like water, pop, juice, broth, Popsicles, or Jello. **Do not drink anything brown, red, orange, or purple.** (If you have diabetes, contact your primary doctor about possible changes to your medication.)
- Pick up your prescription for a bottle of Go-Lytely bowel prep solution. We will have sent a prescription to your pharmacy for you to pick up.
- Mix up one gallon of the Go-Lytely according to directions. You will only drink half the amount that you prepare.
- Drink **one-half (1/2) bottle of the Go-Lytely bowel prep solution** the evening before your exam. Begin drinking this solution between 4:00 p.m. and 6:00 p.m. After midnight the evening before your appointment, do not eat or drink except for necessary medication with a sip of water.
- Do not smoke for 24 hours before your exam.
- Male patients should shave their abdomen 6 inches (15 cm) above and below the navel.

The day of the exam:

- If you take morning medications, take them before 5:00 a.m.
- Dress in loose-fitting two-piece clothing.
- A doctor will discuss the exam with you so you can give your informed consent.

Continued

- The adhesive pads and sensor electrodes will be put on your chest and abdomen. They will be connected to the data recorder and battery pack you will wear in a belt around your waist. After that, you will swallow the capsule.

After swallowing the capsule:

- Do not eat or drink for at least 2 hours. After 4 hours you may have a light snack. After the exam is completed, you may return to your normal diet.
- Contact the Digestive Care Center immediately if you have any abdominal pain, nausea or vomiting.
- Until the capsule is passed in your stool, you should not be near any source of powerful electromagnetic fields. Examples include being near MRI (magnetic resonance imaging) equipment or an amateur (ham) radio.
- Sometimes, some images may be lost due to interference. On rare occasions this may result in the need to repeat the exam.
- You will have the capsule for about eight hours. Do not disconnect or remove the belt at any time during this period.
- Since the data recorder is actually a small computer, treat it with care and protect it. Avoid sudden movement and banging the data recorder. Allow air to circulate around the device. Make sure it is not wrapped snugly in clothing or blankets.
- During the exam, you should check every 15 minutes that the small green light on top of the data recorder is blinking twice every second. If the light stops blinking at this rate, write down the time and contact the Digestive Care Center. You should also write down the time and nature of any event such as eating, drinking, your activity and unusual sensations.
- Avoid strenuous physical activity, especially if it makes you sweat. Do not bend over or stoop during the exam.
