

HealthPartners Preferred Drug List

For the most current information on the HealthPartners Preferred Drug List, visit our web site at **healthpartners.com**

Updated: October 2009

450193 ©2009 HealthPartners

Finding the right medication can be important to your health. But with so many choices, how do you know which drug is going to be right for you? Fortunately, we can help. The HealthPartners formulary lists prescription drugs that have been evaluated for safety and effectiveness—and are covered by your health plan.

What is a preferred drug list?

A preferred drug list is a list of drugs that are covered at the highest level in our health plan. Think of a preferred drug list as a medicine chest. You wouldn't think of stocking your medicine chest with all available products. Instead, you choose what you think would be best for different uses. At HealthPartners, we choose medications that have been demonstrated to be safe, effective and affordable. (Being on the preferred drug list does not guarantee that a particular drug will be covered under all circumstances.)

Who decides what's in our medicine chest?

Thousands of drugs are on the market, and new ones are being introduced all the time. To make sure our members get quality, safe and cost-effective medications, we continually review and evaluate new and existing drugs.

Decisions on which drugs to include in the HealthPartners preferred drug list are made by the physicians and pharmacists on our Pharmacy and Therapeutics Committee. The Committee develops, manages, updates and administers our preferred drug list.

How is the decision made to include a drug on our preferred drug list?

The HealthPartners Pharmacy and Therapeutics (P&T) Committee is responsible for maintaining our outpatient drug preferred drug list. It includes 14 practicing physicians and pharmacists from throughout HealthPartners.

These experts review the scientific data on new and existing drugs, select the ones that are both safe and effective, and regularly update our preferred drug list. The committee also relies on clinical pharmacists and work groups made up of practicing experts in various areas to review drug information and make recommendations.

How often do drugs get reviewed for the preferred drug list?

The P&T committee meets bimonthly to review drug information and work-group recommendations, analyze data and present concerns. Categories of similar medications, such as heart medication or diabetes drugs, are reviewed regularly. Using information obtained during these reviews, the committee updates the preferred drug list quarterly.

Why does HealthPartners use a preferred drug list?

Using a preferred drug list not only serves to protect you from unsafe products, but it also helps us to use your premium dollars responsibly. With pharmaceutical costs skyrocketing and pharmaceutical companies advertising heavily to drive up consumer demand for new products, the savings achieved by using a preferred drug list are critical in keeping your premiums affordable, while providing the best care.

What is the difference between a brand-name and a generic drug?

The preferred drug list includes both brand-name and generic drugs. The brand-name is the trade name for the drug produced by a particular manufacturer. The generic name is the chemical name for the drug. Generic drugs are identical to brand-name drugs in dosage form, safety, strength, how they're given, quality, performance and intended use. They meet the rigorous quality standards set by the U.S. Food and Drug Administration, perform the same as the comparable brand-name product and save you money.

Why do I automatically receive a generic drug when my physician prescribes a brand-name drug?

Minnesota law requires pharmacies to substitute a generic equivalent for the prescribed brand-name drug (if a U.S. Food and Drug Administration (FDA)-approved generic is available and safely interchangeable) unless the doctor specifically prescribes otherwise or the patient objects. Like our preferred drug list, this consumer protection law is intended to protect consumers from paying for a more expensive drug when a less expensive, therapeutically equivalent drug is available.

If it's important for you to have the brand-name version of the drug, you can pay the difference in cost between the generic drug and the brand-name version, plus your copay.

Do I have access to medications that are not on the preferred drug list?

In some cases, you may need a drug that is not on the preferred drug list. Your doctor can request that an exception be made so the nonpreferred drug list item can be covered. The clinical pharmacy staff reviews all these requests and decides when an exception is warranted for coverage. Generally, the decision will be made the same day as the request was made by your doctor.

What if my physician prescribes a drug that is not in the HealthPartners medicine chest?

Doctors don't always remember to prescribe from a particular health plan's preferred drug list. When your personal physician prescribes something for you, you may want to ask if the medication is on the HealthPartners preferred drug list. If it isn't, you may want to ask your physician whether a preferred drug list item would be suitable for you.

Why do some drugs require prior authorization (PA)?

For certain drugs, the Pharmacy and Therapeutics Committee has developed criteria that must be met before the drugs will be approved for coverage, even if it is on the preferred drug list. Your doctor will request coverage for these drugs on your behalf. Generally, the decision will be made the same day as the request was made by your doctor. These drugs are noted on the preferred drug list with a "PA" after their names.

What is Step Therapy (ST)?

For some conditions, your doctor will need to prescribe one medication before trying another--to use "Drug A" before trying "Drug B," in other words. This sequential approach is called "Step Therapy." If "Drug A" doesn't work for you, then your doctor may prescribe "Drug B," and coverage for "Drug B" will automatically be approved for you at the pharmacy. If "Drug A" has not already been prescribed for you, your doctor will need to specifically request coverage of "Drug B" on your behalf. Generally, the decision as to whether that medication will be covered will be made the same day the request was submitted. Step Therapy medications are noted on the preferred drug list with an "ST" after their names.

What is Age Edit (AE)?

This medication is covered for patients within a specific age group. Patients outside of this age group will need to meet specific criteria before the medication will be approved for coverage. Your doctor will request coverage for this drug on your behalf. Generally, the decision will be made the same day the request is submitted.

What is Physician Edit (MD)?

This medication is covered when prescribed by certain physician specialists. If the medication is prescribed by a physician in any other specialty, patients need to meet specific criteria before the medication will be approved for coverage. Your doctor will request coverage for this drug on your behalf. Generally, the decision will be made the same day the request is submitted.

Our Guiding Principles

Here, in order of importance, are the nine guiding principles we use to develop and maintain our preferred drug list.

1. Look for proven effectiveness, documented in the medical literature.

First and foremost, medical literature has to document that the drug works well. To determine this, we look at randomized controlled clinical trials published in peer-reviewed medical journals. We also consider observational studies and medical opinion.

2. Strive to maximize safety and minimize the potential for errors.

We compare the risks and benefits of a given drug with other treatments. This includes looking at its potential for causing serious adverse reactions, as well as such things as possible name confusion. We always attempt to minimize the potential for errors.

3. Improve the overall value.

When evaluating a new drug or therapy, we compare its value relative to existing treatments--in both medical outcomes and medication costs.

4. Emphasize products essential to health.

We focus on medications that are essential to health. Cosmetic and lifestyle medications, such as Propecia® for hair loss, are generally excluded from the preferred drug list.

5. Eliminate unnecessary duplication.

We favor unique medications that have advantages in effectiveness, safety or value over other drugs currently available.

6. Strive to improve patient compliance and satisfaction.

We favor products that are significantly more convenient for patients and that help increase patient satisfaction while maintaining overall value.

7. Support protocols developed by the Institute for Clinical Systems Improvement and consider other locally adopted treatment procedures.

The Institute is a collaborative organization of medical groups, including HealthPartners Medical Group, committed to improving health care quality. The Institute features a physician-led, physician-governed process to review the best available research and to create "best-practice" protocols. These protocols represent the current thinking on the best way to handle specific medical issues.

8. Provide long-term stability of the preferred drug list.

Because it is important for members to have continuity in their care, we try to keep the preferred drug list as stable as possible while still being responsive to a changing marketplace.

9. Serve all members.

While the preferred drug list serves the majority of our members well, we also have processes in place for getting medications that are not on the preferred drug list. Providers may request either a prior approval for using certain drugs or request that a drug not found on the preferred drug list be covered.

A Guide to the preferred drug list

Drugs are listed alphabetically by category of use. The brand-name version of each item is noted by a ®. Both the brand name and its generic name are listed together, with the most common name presented first.

The preferred drug list is expanded and updated regularly. Visit the HealthPartners web site at **healthpartners.com** to see the most current version of the preferred drug list. You can also search by the category of use or by specific drug.

Being on the preferred drug list does not guarantee that a particular drug will be covered under your contract.

What does the "\$" symbol mean?

The "\$" symbol next to the medication name indicates the average retail price you would pay for a typical prescription quantity, excluding any pharmacy benefit you may have. The price listed for long-term-use medications is for a 30-day supply. All prices reflect the most recent data from actual medication use.

\$ = \$1.00 - \$20.99

\$\$ = \$21.00 - \$40.99

\$\$\$ = \$41.00 - \$60.99

\$\$\$\$ = \$61.00 - \$99.99

\$\$\$\$\$ = >\$100.00
