

School-Based Health Resource Centers

Park Nicollet Foundation started investing in community health solutions in 1996 with the opening of our first school-based children's health clinic, the St. Louis Park Central Clinic.

Today, 26 years later, thanks to donors and partners, we continue to provide no-fee medical care, mental health, dental, prescription support, insurance navigation and more to children and youth in communities with high need and few health resources available. Our four school-based clinics are located in Brooklyn Center High School, Burnsville Diamondhead Clinic, Richfield High School and St. Louis Park Central Clinic.

The value of these programs is at once immediate and everlasting. Studies have conclusively and consistently shown that access to health and mental health care as a young person can transform their future and life trajectory, and positively impact the community in which they live and attend school.

Better health of children and families strengthens quality of life and healthier outcomes. Graduation rates go up, highly mobile families settle in, teenage pregnancy and suicide rates decrease, parents are less stressed and anxious, and families no longer access high-cost emergency room care for routine health issues.

On-site support available

“When I was told I needed a physical to sign up for sports, I was stressed because I didn't know how I'd make it to a clinic. My parents both work late and I walk to school, so I didn't know what to do.

“When I found out about the Health Resource Center, I didn't feel that stress

anymore. I was glad that I could get the physical done during class and that I didn't have to walk in the cold to get it done. It was helpful that I didn't need an appointment and could just walk in.

“When I went to the clinic for that physical, the doctor told me about some of the other things the clinic could help with.”

Immunizations provided

574

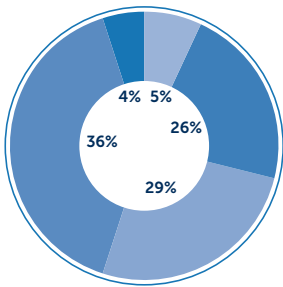

Children with no health-care coverage care provided

Thanks to the generosity of our donors in 2022, our school-based health resource centers provided no-fee medical care and more to children in high-need communities. The health services and support provided through these centers improves a child's access to care and health and improves health equity. Providing barrier-free health care to children and youth can transform their future and life trajectory. Thank you for investing in healthier futures.

Student Outcomes

A recent CDC task force nationwide study on outcomes of school-based health centers showed the following results:

- High school dropout rates decrease **29%** on average
- Drug use decrease **27%** on average

School-based health centers will be even more crucial to improving student health as we emerge from the pandemic.

A HealthPartners Institute study showed 88% of educators think Park Nicollet Foundation's school clinics have a positive impact on students' ability to learn.
