Artificial insemination (AI) or intrauterine insemination (IUI)

These services may or may not be covered by your HealthPartners plan. Please see your plan documents for your specific coverage information. If there is a difference between this general information and your plan documents, your plan documents will be used to determine your coverage.

Administrative Process

Does not require prior authorization.

Coverage

Artificial insemination (AI) and intrauterine insemination (IUI) are covered only as specified in the Indications that are covered/Indications that are not covered listed below. Coverage includes analysis of sperm and supplies associated with artificial insemination.

Indications that are covered

1. The member has a diagnosis of infertility. Examples include:
   A. A female member with a diagnosis of infertility.
   B. Couples where both the male and female are members and one or both have a diagnosis of infertility.
   C. Diagnoses that include male factor infertility, cervical factor infertility and unexplained infertility.
2. Six cycles (see definition of cycle below) per confirmed pregnancy. The benefits renew after documentation of pregnancy.
3. Supraovulatory drugs may be given alone or in combination with another supraovulatory drug during AI or IUI treatment. Six cycles of drugs are covered with the covered six cycles of AI or IUI per pregnancy unless the member has already received six cycles of supraovulatory drugs prior to starting AI or IUI.

Indications that are not covered

1. When the person with the diagnosis or receiving treatment is not a covered member. Examples include:
   A. The male partner is the member and the female partner has an infertility diagnosis. AI or IUI would not be covered for this couple because the procedure would not be performed on the covered member (the male).
   B. The male partner is the member and has an infertility diagnosis. AI or IUI would not be covered for this couple because the procedure would not be performed on the covered member (the male).
2. The following, which are stated in the contract under Exclusions:
   A. When artificial insemination is requested due to previous elected sterilization.
   B. Charges for more than six cycles of AI or IUI per pregnancy.
   C. Sperm or ova retrieval and sperm, ova or embryo storage.
   D. Supraovulatory medication beyond six cycles per pregnancy. Some courses of treatment for infertility include supraovulatory medications before AI or IUI are performed. More than six cycles of supraovulatory medications per cycle are not covered, so occasionally the AI & IUI would be covered but the medications would not be covered.

Note: The benefits cease the day after the 6th cycle.

Definitions

Artificial insemination (AI) is placing sperm into a woman's vagina for the purpose of conception.

Cycle: For the purpose of this policy and benefit coverage, a cycle refers to a menstrual cycle, generally 28-32 days. There may be two AIs or IUIs done during one menstrual cycle. For the purpose of benefit coverage, these two AIs or IUIs would be considered one cycle.
Infertility is a disease defined by the failure to achieve a successful pregnancy after 12 months or more of appropriate, timed unprotected intercourse or therapeutic donor insemination. Earlier evaluation and treatment may be justified based on medical history and physical findings and is warranted after 6 months for women over age 35 years. Disease is defined as “any deviation from or interruption of the normal structure or function of any part, organ or system of the body as manifested by characteristic symptoms and signs; the etiology, pathology and prognosis may be known or unknown” (American Society for Reproductive Medicine, 2013).

Intra-uterine insemination (IUI) is placing sperm into a woman’s uterus for the purpose of conception.

Ova: Eggs
