Physical and occupational therapy – rehabilitative

These services may or may not be covered by your HealthPartners plan. Please see your plan documents for your specific coverage information. If there is a difference between this general information and your plan documents, your plan documents will be used to determine your coverage.

Administrative Process

Prior authorization is not required. However, services with specific coverage criteria may be reviewed retrospectively to determine if criteria are being met. Retrospective denial may result if criteria are not met.

- Athletic Trainer (AT) visits count towards Physical Therapy (PT) limits.
- Occupational Therapy (OT) visits count towards Physical Therapy (PT) limits unless modifier ‘GO’ is used when billing.

Coverage

Physical therapy (PT), occupational therapy (OT) and athletic trainer (AT) visits are generally covered subject to the indications listed below and per your plan documents.

Indications that are covered

To be eligible for physical or occupational therapy services for rehabilitation, the following criteria must be met:

1. Therapy must be rehabilitative in nature and required to address loss of function due to illness and/or injury as identified in the evaluation. The evaluation done to determine the need for therapy should include the following:
   A. An assessment of the member’s therapy progress so far, if applicable
   B. Measurable goals for continued therapy
   C. Whether the member can
      i. participate in therapy activities to improve, develop or restore their physical or sensory functioning; and
      ii. learn or relearn daily living skills, or
      iii. learn different ways of performing daily living skills to increase their independence, and
   D. Whether therapy is resulting in improvement. This would be determined by documentation showing:
      i. Decreased symptoms, and/or
      ii. Measurements taken by the therapist which show improvements in the member’s physical signs of injury; and
      iii. Member has fewer limitations on activity.

Indications that are not covered

1. Group therapy
2. Educational therapy
3. Therapy to improve social skills
4. Therapy when measurable functional improvement is not expected or progress has reached a plateau
5. Vocational and community reintegration services
6. Maintenance therapy
7. Recreational or vocational therapy including therapy for instrumental activities of daily living (IADLs)
8. Custodial services
9. Services not designed to improve or maintain the functional or sensory status of a member with a physical impairment
10. Passive therapies as stand-alone treatments
11. Open swimming / exercise programs
12. Whirlpool therapy that is not part of a physical therapy (PT) or occupational therapy (OT) regimen/program for treatment of a medical condition
13. PT/OT/ athletic trainer (AT) care not performed or supervised by a licensed PT or OT or medical practitioner, per licensure requirements
14. Equine or hippotherapy (horse riding therapy)
15. Massage therapy if provided by a massage therapist or any provider other than a PT, OT, AT or chiropractor.
16. Intensive PT or OT related to TheraSuit use. The TheraSuit is considered experimental/investigational, therefore therapies utilizing the suit are not covered.
If available, codes are listed below for informational purposes only, and do not guarantee member coverage or provider reimbursement. The list may not be all-inclusive.

The services associated with these codes do not require prior authorization:

<tr>
<td>97139</td>
<td>Unlisted therapeutic procedure (specify)</td>
</tr>
<tr>
<td>97140</td>
<td>Manual therapy techniques (e.g., mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes</td>
</tr>
<tr>
<td>97161</td>
<td>Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97162</td>
<td>Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97163</td>
<td>Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 40 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
</tbody>
</table>
Athletic training evaluation, high complexity, requiring these components: A medical history and physical activity profile with 1-2 comorbidities that affect physical activity; An examination of affected body area and other symptomatic or related systems addressing a total of 3 or more elements from any of the following: body structures, physical activity, and/or participation deficiencies; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.

97171
Athletic training evaluation, high complexity, requiring these components: A medical history and physical activity profile with 1-2 comorbidities that affect physical activity; An examination of affected body area and other symptomatic or related systems addressing a total of 3 or more elements from any of the following: body structures, physical activity, and/or participation deficiencies; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.
physical activity profile, with 3 or more comorbidities that affect physical activity; A comprehensive examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures, physical activity, and/or participation deficiencies; Clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.

97172 Re-evaluation of athletic training established plan of care requiring these components: An assessment of patient's current functional status when there is a documented change; and A revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome with an update in management options, goals, and interventions. Typically, 20 minutes are spent face-to-face with the patient and/or family.

97530 Therapeutic activities, direct (one-on-one) patient contact by the provider (use of dynamic activities to improve functional performance), each 15 minutes

97535 Self-care/home management training (e.g., activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact by provider, each 15 minutes

97542 Wheelchair management (e.g., assessment, fitting, training), each 15 minutes

97750 Physical performance test or measurement (e.g., musculoskeletal, functional capacity), with written report, each 15 minutes

97760 Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(s), lower extremity(s) and/or trunk, each 15 minutes

97761 Prosthetic training, upper and/or lower extremity(s), each 15 minutes

97763 Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk, subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes

97799 Unlisted physical medicine/rehabilitation service or procedure

Definitions

Active therapies – require active patient participation. Examples include movement-based activities, including stretching and range of motion exercises; specific strengthening exercises; and pain relief exercises.

Activities of daily living (ADLs) – everyday activities such as eating, bathing, dressing, toileting, transferring, continence, dressing, personal hygiene and mobility necessary to achieve these activities.

Athletic Trainers (ATs) – health care professionals who collaborate with physicians to provide preventive services, emergency care, clinical diagnosis, therapeutic intervention and rehabilitation of injuries and medical conditions. (NATA National Athletic Trainers’ Association)

Custodial care – supportive services focusing on activities of daily life that do not require the skills of qualified technical or professional personnel, including but not limited to, bathing, dressing, and feeding.

Functional skills – essential activities of daily life common to all members such as dressing, feeding, ambulation, transfers and fine motor skills. Measurable progress emphasizes mastery of functional skills and independence in the context of the member’s potential ability as specified within a care plan or treatment goals.

Instrumental activities of daily living (IADLs) – activities related to independent living, such as cleaning, using a telephone, shopping, laundry, managing medications, transportation and managing money.

Maintenance care – non-rehabilitative care and supportive services, including skilled or non-skilled nursing care for a member whose condition has not significantly improved or deteriorated over a measurable period of time (generally a period of time of two months from establishing a functional goal).

Occupational therapy (OT) – Therapy to help people across the lifespan participate in the things they want and need
to do through the therapeutic use of everyday activities (occupations) performed by occupational therapists and occupational therapy assistants. (AOTA American Occupational Therapy Association)

Passive therapies – are performed by the provider and do not require active patient participation. Examples include mobilization and manipulation, manual lymphatic drainage, manual traction, myofascial release, massage, heat/ice packs, electrical stimulation (including use of transcutaneous electrical nerve stimulator [TENS] units), and cupping.

Physical therapy (PT) – the examination, treatment, and instruction of persons in order to detect, assess, prevent, correct, alleviate, and limit physical disability and bodily malfunction performed by a licensed physical therapist or physical therapy assistant. (APTA-American Physical therapy Association)

Rehabilitative therapy – Therapy provided by a PT, OT or AT as a restorative service, provided for the purpose of obtaining significant functional improvement, within a predictable period of time, (generally within a period of two months) toward a patient's maximum potential ability to perform functional daily living activities.

Vocational – therapy related to performing or enhancing one’s occupation or work

Products

This information is for most, but not all, HealthPartners plans. Please read your plan documents to see if your plan has limits or will not cover some items. If there is a difference between this general information and your plan documents, your plan documents will be used to determine your coverage. These coverage criteria may not apply to Medicare Products if Medicare requires different coverage. For more information regarding Medicare coverage criteria or for a copy of a Medicare coverage policy, contact Member Services at 952-883-7979 or 1-800-233-9645.
