

Adult: Colorectal Cancer Screening - Primary Care

Colorectal cancer is one of the most common forms of cancer and occurs when a small tissue growth in the rectum or large intestine turns cancerous. Colorectal cancer is one of the top two leading causes of cancer-related deaths for men and women. Patients have a good chance of surviving if it is caught early. High quality care for the early detection of colorectal cancer should include age-appropriate colorectal cancer screening tests. The bar chart and percentages below will tell you how successful Minnesota physicians and other health care providers are in helping adults of a certain age get screening tests for colorectal cancer.
