

## Child: Immunizations - Primary Care

Protecting children from diseases involves getting important shots (immunizations). Receiving immunizations early in life affords children the greatest protection. High quality health care includes making sure that children receive all the proper immunizations before the age of 2: •Diphtheria and Tetanus•Polio•Measles, Mumps and Rubella •H Influenza Type B•Hepatitis B•Chicken Pox•Pneumococcal

The bar charts and percentages below will tell you how successful Minnesota physicians and other health care providers are in helping children receive all the proper immunizations.
