COPD readmissions

This rate represents patients, age 65 or older, who had to return to the hospital for another stay within 30 days of being treated for COPD The rate compares the number of patients who return to the hospital to the target threshold of 25.5%. Rates are adjusted to take into account how sick patients were before they were admitted to the hospital.

Knee and hip replacement readmissions

This rate represents patients, age 65 or older, who had to return to the hospital for another stay within 30 days of being treated for knee and hip replacement. The rate compares the number of patients who return to the hospital to the target threshold of 6.5%. Rates are adjusted to take into account how sick patients were before they were admitted to the hospital.
