

Updates to the HealthPartners Commercial Formularies are listed below.

Updates include:

- GLP medications for diabetes will require step-therapy on October 1, 2023. This update applies to dulaglutide (Trulicity), exenatide (Bydureon and Byetta), liraglutide (Victoza), and semaglutide (Ozempic and Rybelsus). Step-therapy will reserve these medications for members with previous pharmacy claims for diabetes medications. Prior authorization is available for members not meeting step-therapy requirements. This new step-therapy program is intended to limit the off-label use for weight loss. Prior authorization and step-therapy programs are becoming standard in the market. Patients with diabetes who do not meet step-therapy requirements are asked to work with their provider for prior authorization. Patients using these GLP medications for weight loss are asked to work with their provider for prior authorization for weight loss medications.

Please see [www.healthpartners.com/formularies](http://www.healthpartners.com/formularies) for details.

Updates are effective by October 1, 2023.
